Dear Mr. Brite

Copper Brite Incorporated

1482 East Valley Rd., Suite 29

Santa Barbara, CA, 93108

Dear Alan:

It has been several years since we conducted a controlled survey of our buildings to determine the effectiveness of Roach Prufe. I am sure you remember the positive report of control of roaches in the buildings. What you aren't aware of is that I have included the application of Roach Prufe in all construction and remodeling specifications. In the buildings that have been constructed, we have placed Roach Prufe between the walls prior to sheetrock, cabinets, etc. and are glad to report that no roaches have been noticed. The same holds true in renovation. Roach Prufe is applied in walls prior to sheet rock, cabinets, etc.

You may want to pass this information along to help others. It has surely proved to be an inexpensive investment for a roach free building here at Northeastern State University.

Sincerely,

Robert Patrick Jr.

Physical Plant Director
